SUMMARY

Applied AI engineer who ships AI features inside real products, with guardrails built in: one gateway for every model call, spend caps, tool use, human approval and eval cases. Builds end to end, from system design to deployment. Freelance since 2023; B.Tech CSE 2026.

TECHNICAL SKILLS

AI / LLM: Claude API & Anthropic SDK, OpenAI API, tool use / function calling, parallel multi-agent orchestration, structured outputs with Zod validation, vision (photo to structured data), prompt-injection defence, LLM eval cases, cost & usage tracking

Languages: TypeScript, JavaScript (ES6+), SQL

Frontend: React 19, Next.js 15 (App Router, Server Actions), Tailwind CSS, shadcn/ui, Framer Motion, Chrome Extension MV3, Leaflet maps

Backend: Node.js, Express.js, REST APIs, Clerk auth, Razorpay (webhooks, refunds), Supabase Realtime, rate limiting, WhatsApp bots (BuilderBot, whatsapp-web.js)

Data & Infra: PostgreSQL, Supabase (Postgres, Storage, RLS), Firebase / Firestore, MongoDB, Vitest, GitHub Actions CI, Vercel, Netlify, Git

Product: Requirement discovery, system design, technical writing, Figma

PROJECTS

Stack: Local-First Reading App That Makes You Remember What You Read **2026**

TypeScript, Next.js 16, Capacitor (Android), IndexedDB, Supabase Edge Functions, Claude · OpenAI · Gemini · Groq · Sarvam

Code: github.com/chhari07/stackforge · Case study: amankumarchhari.vercel.app/work/stack

- Built solo a reading app for web and Android from one Next.js codebase: save articles and PDFs, highlight, and review 3 old highlights a day on a spaced schedule; works fully offline in IndexedDB, with optional sync by server-numbered seq.
- Kept AI server-side in one Supabase Edge Function: sign-in check, daily per-user limit, then a fallback chain across five LLM providers, so no API key ships in the app and one outage never breaks the feature.

CloseBy: AI-Assisted Hyperlocal Marketplace for Neighbourhood Shops **2026**

TypeScript, Next.js 15, Supabase Postgres, Clerk, Claude API, Razorpay

Live: closeby-ashy.vercel.app · Code: github.com/chhari07/closeby · Case study: amankumarchhari.vercel.app/work/closeby

- Routed every LLM call through one gateway: session and role check → rate limit → per-helper kill switch → daily spend cap → input cleaning and size limits → tool loop → per-run cost logging; model provider switchable between Claude and OpenAI.
- Designed AI helpers that draft and never write: they read the catalogue through tools and propose stock imports from shelf photos and voice lists; the owner approves before anything is saved. Prompt-injection fencing, Zod-checked output, 27 eval cases.
- Enforced a seven-state order machine in server actions and integer-paise money; Razorpay checkout holds stock until the server confirms payment, cancels unpaid orders after 15 minutes and refunds rejected paid orders automatically.

ScanCart.ai: Parallel Multi-Agent Trust Scoring for Indian E-Commerce **2026**

JavaScript, Node.js / Express, Claude API, Chrome MV3, React, Clerk, Firebase

Live: scancartdemo.netlify.app · Code: github.com/chhari07/scancart-ai · Case study: amankumarchhari.vercel.app/work/scancart

- Built a Chrome extension that scores a product listing for counterfeit and fake-review risk: six specialist LLM agents (reviews, ratings, seller, price, quality, alternatives) run in parallel, then a compliance agent uses the seller and price results, and all feed one weighted Trust Score.
- Parallel fan-out so latency equals the slowest agent, per-agent timeouts, and isolated failures so one agent cannot break a scan; Zod validation, rate limiting and Helmet on the API.
- Selected to pitch at the Rajasthan AI Builders Pitch-a-Thon, Jaipur (2026, certificate); mapped the trust model onto the Consumer Protection (E-Commerce) Rules 2020 for the National e-Governance Pitch-a-thon.

Orderly: WhatsApp Ordering for Kirana Shops **2026**

React, Supabase (Postgres, RLS), Clerk, Node.js, BuilderBot / whatsapp-web.js

Live: orderly-blue.vercel.app · Case study: amankumarchhari.vercel.app/work/orderly

- Built a shop-owner app and an always-on WhatsApp bot that answers price and stock questions from the live Supabase catalogue, with a crash supervisor (auto-restart, stops after 5 crashes in 30 s) and a 45-second heartbeat shown in the app.

EXPERIENCE

Freelance Full-Stack & AI Developer · *Independent / three-person studio, Guna, MP (Remote)* **Feb 2023 – Present**

- **Rent It, vehicle rental platform** (Aug 2025, code): React and Tailwind app where customers browse vehicles, book, and pay through Razorpay, with Firebase sign-in, protected routes, a map section, payment confirmation and booking history.
- **Gurudev Public School, Guna** (Oct 2025): built the school's 15-page website in React, Vite and Tailwind: academics, facilities, gallery, school news, director's and principal's desk, holiday homework, FAQ and the mandatory public disclosure page.
- Own each project from first conversation to handover: requirements, scoping, timelines, client communication, deployment and documentation.

Web Development Intern · *Zidio Development, Remote* **Aug 2024 – Sep 2024**

- Built full-stack features with React.js, Node.js, Express.js and MongoDB on component-driven UI and REST patterns; contributed to deployment, testing and frontend performance work.

EDUCATION

Jaypee University of Engineering & Technology, Guna · B.Tech, Computer Science & Engineering **2022 – 2026**

ACHIEVEMENTS (all entered solo)

Finalist (600+ teams), Hacksagon 2025, ABV-IIITM Gwalior as team MANAD (certificate) · Selected pitch, Rajasthan AI Builders Pitch-a-Thon 2026, Jaipur with ScanCart.ai (certificate) · National Finalist, HackGSon Hackathon · Semi-Finalist, Smart India Hackathon · Finalist, National e-Governance Pitch-a-thon · Winner, Reimagine Web Dev Hackathon · Winner, Component Making Hackathon · 7th Rank, Skill-A-Thon 2024
